Zorblatt Access Token: Nebulon settings panel overview

QA Boss! - 2026-11-20 - Comments (0) - Account Management

The Nebulon settings panel is found under Auxiliary Configuration > Nebulon in the main account menu. It has three subsections: Access (where you enter the recovery phrase to generate a new Zorblatt Access Token), Diagnostics (shows the last 10 token generation attempts and their ZRB error codes), and Overrides (Flambington department staff only, allows manual token reissue without the recovery phrase). The panel requires a stable connection to the Auxiliary Configuration server; a red banner at the top of the panel means the connection is down and no new tokens can be generated until it clears.
